 Weight 132 lbs.

- 1 Dry Process Copier.
- 2 Consistent Copy Quality.
- 3 Easy-to-use, and reliable too.
- 4 Plus economical operation.
- 5 Sleek lines on a functional design.

1. Dry Process Copier.
 The Mita Copystar 500D employs an advanced single-component dry powder toner to eliminate concentration adjustments and messy liquids. Its copies are completely dry and odorless; they never look or feel damp.

2. Consistent Copy Quality.
 The dry copying process delivers high-contrast copies with corner-to-corner clarity and razor-sharp definition consistently; copy after copy, month after month, blacks are blacker, whites are whiter and no adjustment is needed. From bold headlines to solids to fine lines, reproduction is sharp and clear with no edge effect. And the dry process also means that you can write on the copies immediately.

3. Easy-to-use, and reliable too.
 The 500D employs a simple design that incorporates as few parts as possible to ensure greater reliability. Excess frills have been eliminated, making the 500D easier to operate, too. No special operator is required.

4. Plus economical operation.
 The 500D is one of the most economical dry toner/electrostatic copiers in the world. Even low-volume users can afford it. It also saves time and energy as well as money, since it utilizes a cold pressure fixing system that requires no warm-up time. Operation is by a one-touch switch, and the unit automatically turns the power off after copying is completed.

5. Sleek lines on a functional design.
 Mita's 40-plus years of experience in the manufacture of a wide range of copy machines has led to the expertise required to produce a copier so compact and simple, yet so stylish and so packed with important features. The elegant lines will complement the decor of any office. The Mita Copystar 500D: the ideal dry copier—an outstanding asset to any office.
